Tasmacritic

DISCOVER. REVIEW. EXPLORE CINEMA.

Final project for the Introduction to Web Programming course

Made by Arsen Zhursunov

Problem & Motivation

- Movie fans need a clean place to browse and review films.
- The project demonstrates practical full-stack web development concepts.
- Tasmacritic combines a polished UI with full-stack web functionality.

Web Support

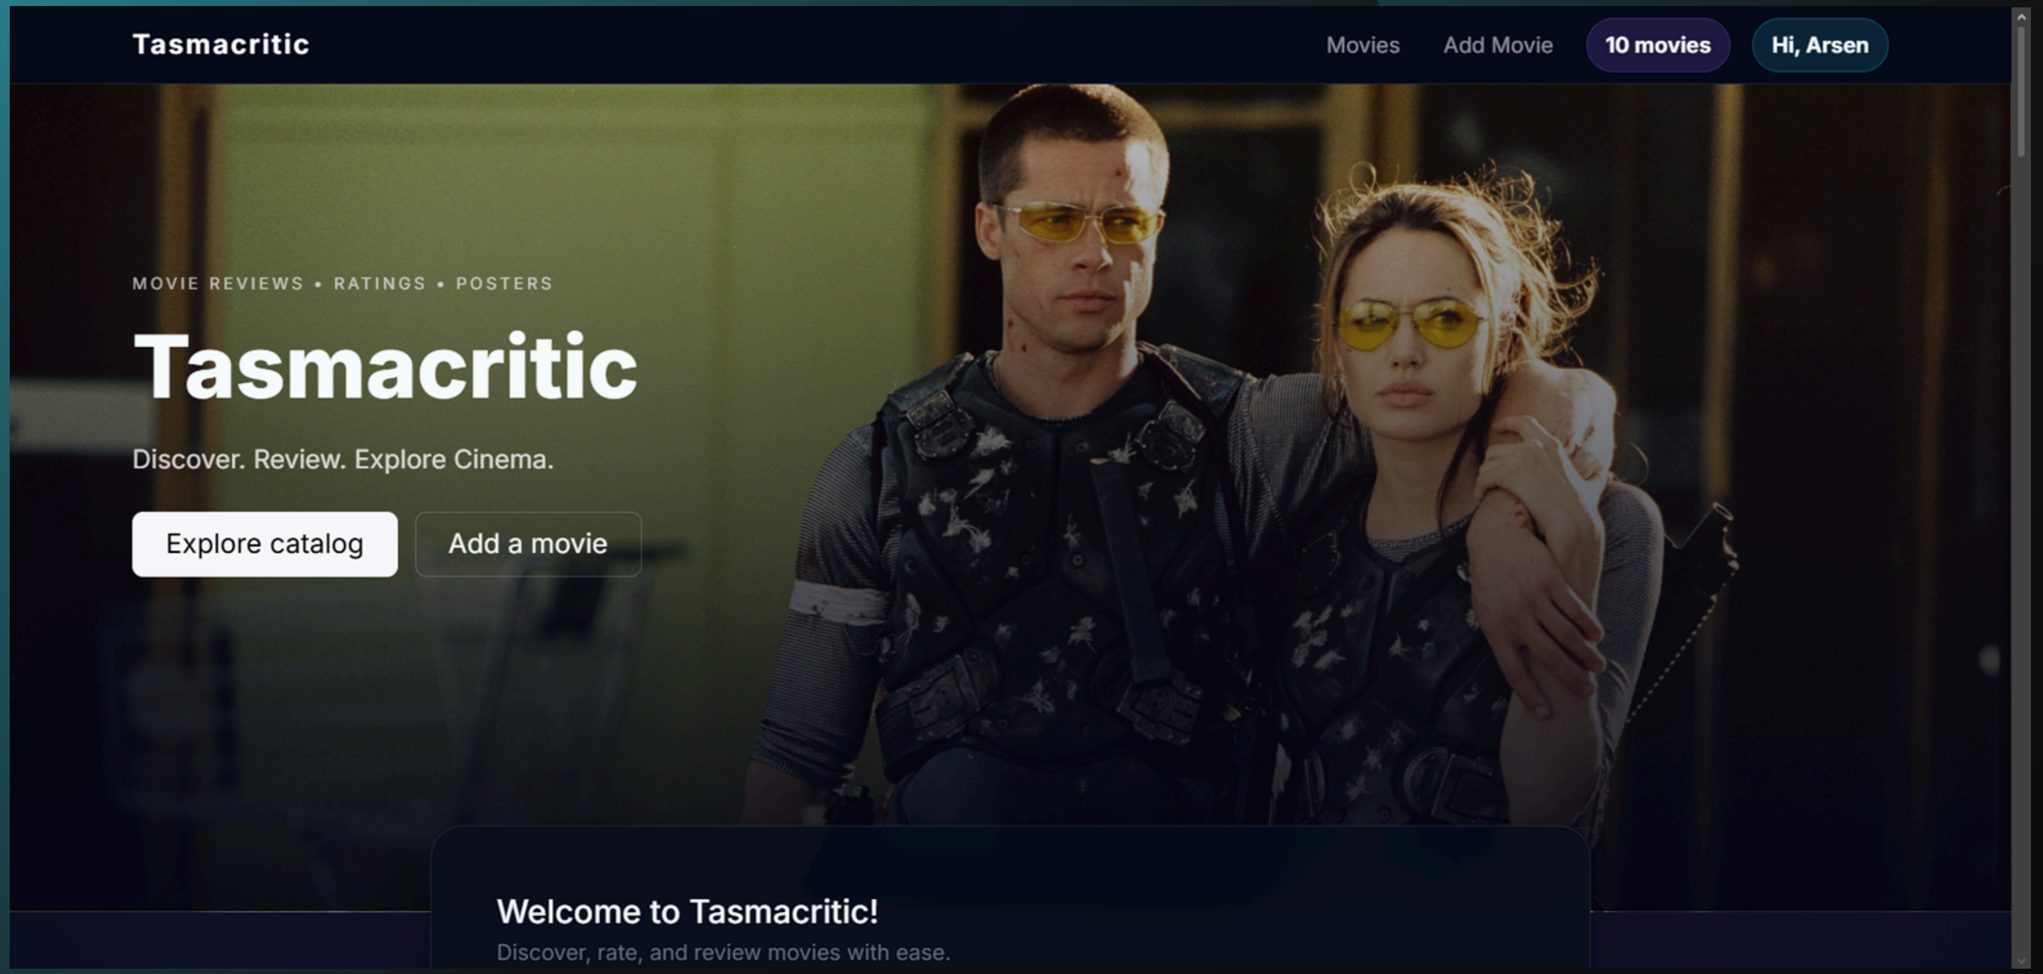
- Name-only entry instead of password-based login.
- Browse 10 default movies with local posters.
- Add, edit, and delete movies.
- Write reviews with color-coded star ratings.
- Add new movies using TMDB lookup or poster upload.

System Architecture

- Frontend: HTML, CSS, Bootstrap, Jinja templates.
- Backend: Flask application factory, forms, routes, and validation.
- Database: SQLite with SQLAlchemy ORM.
- External API: TMDB used optionally for poster lookup.

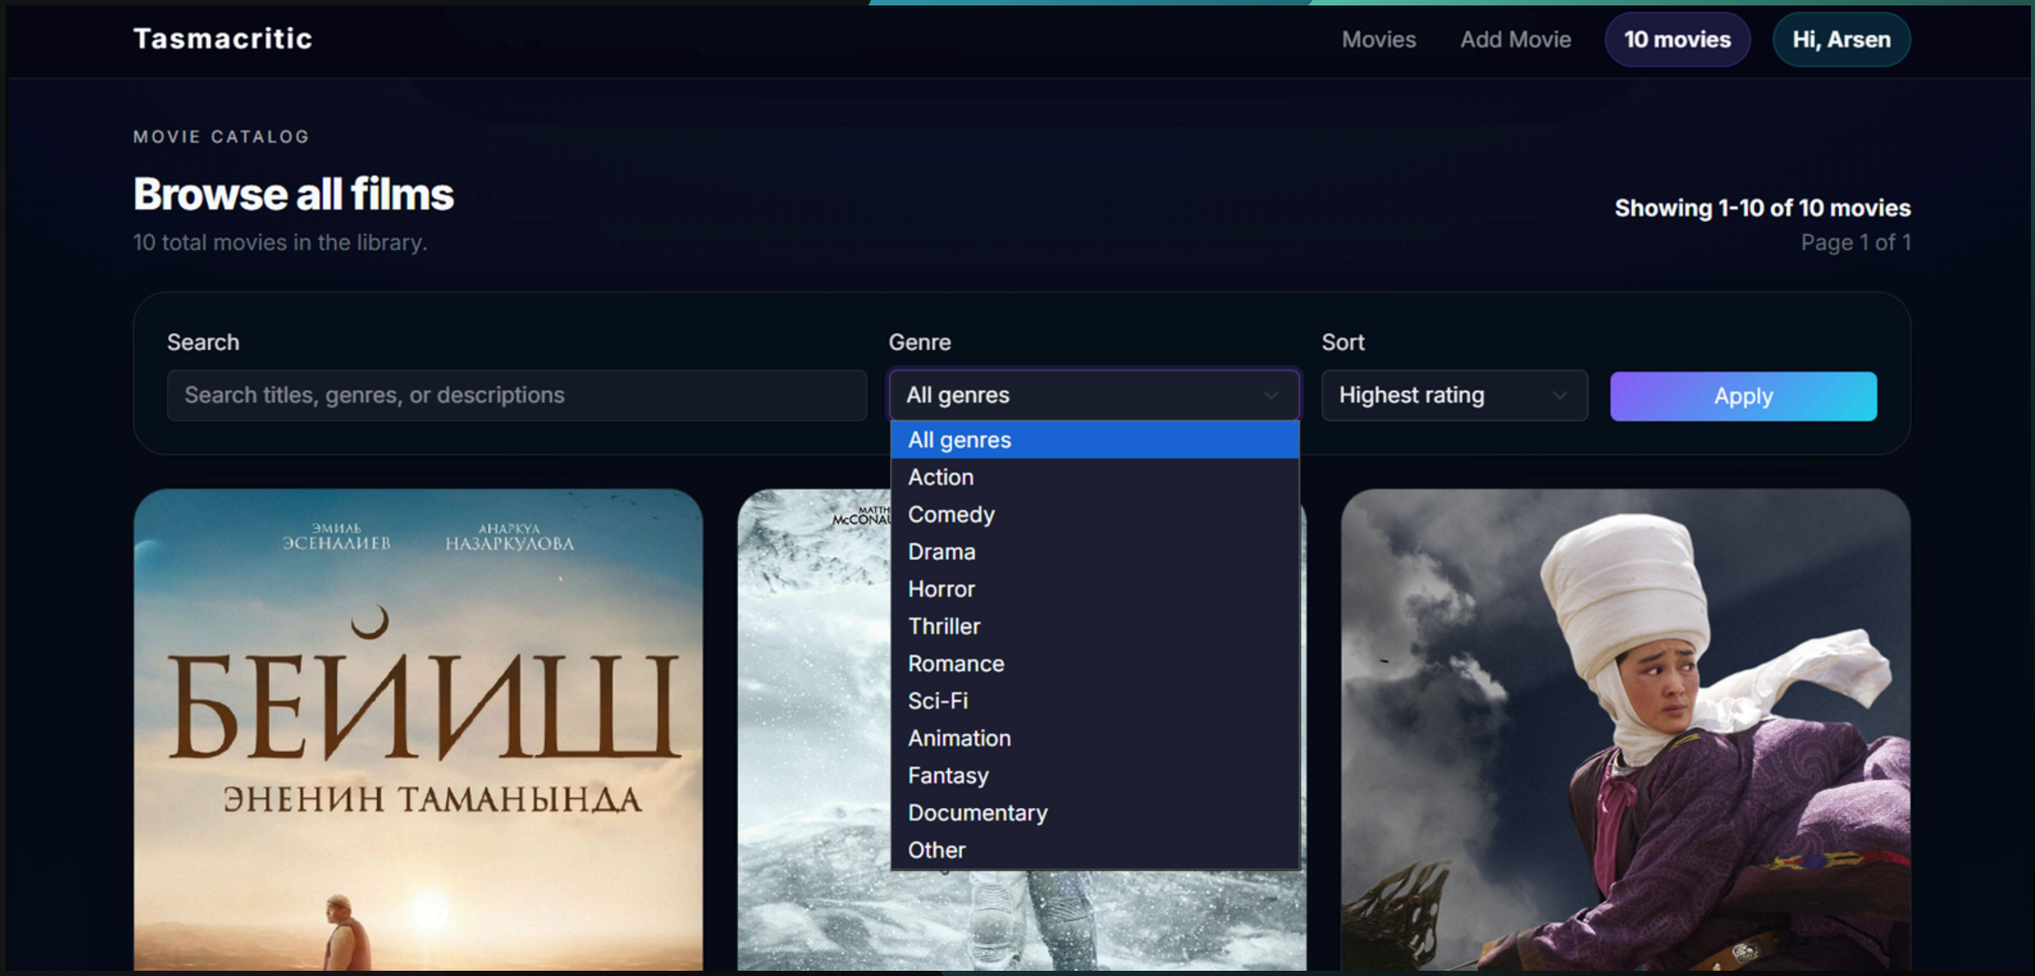
Demo / Results

Hero landing page with smooth scrolling to the catalog.



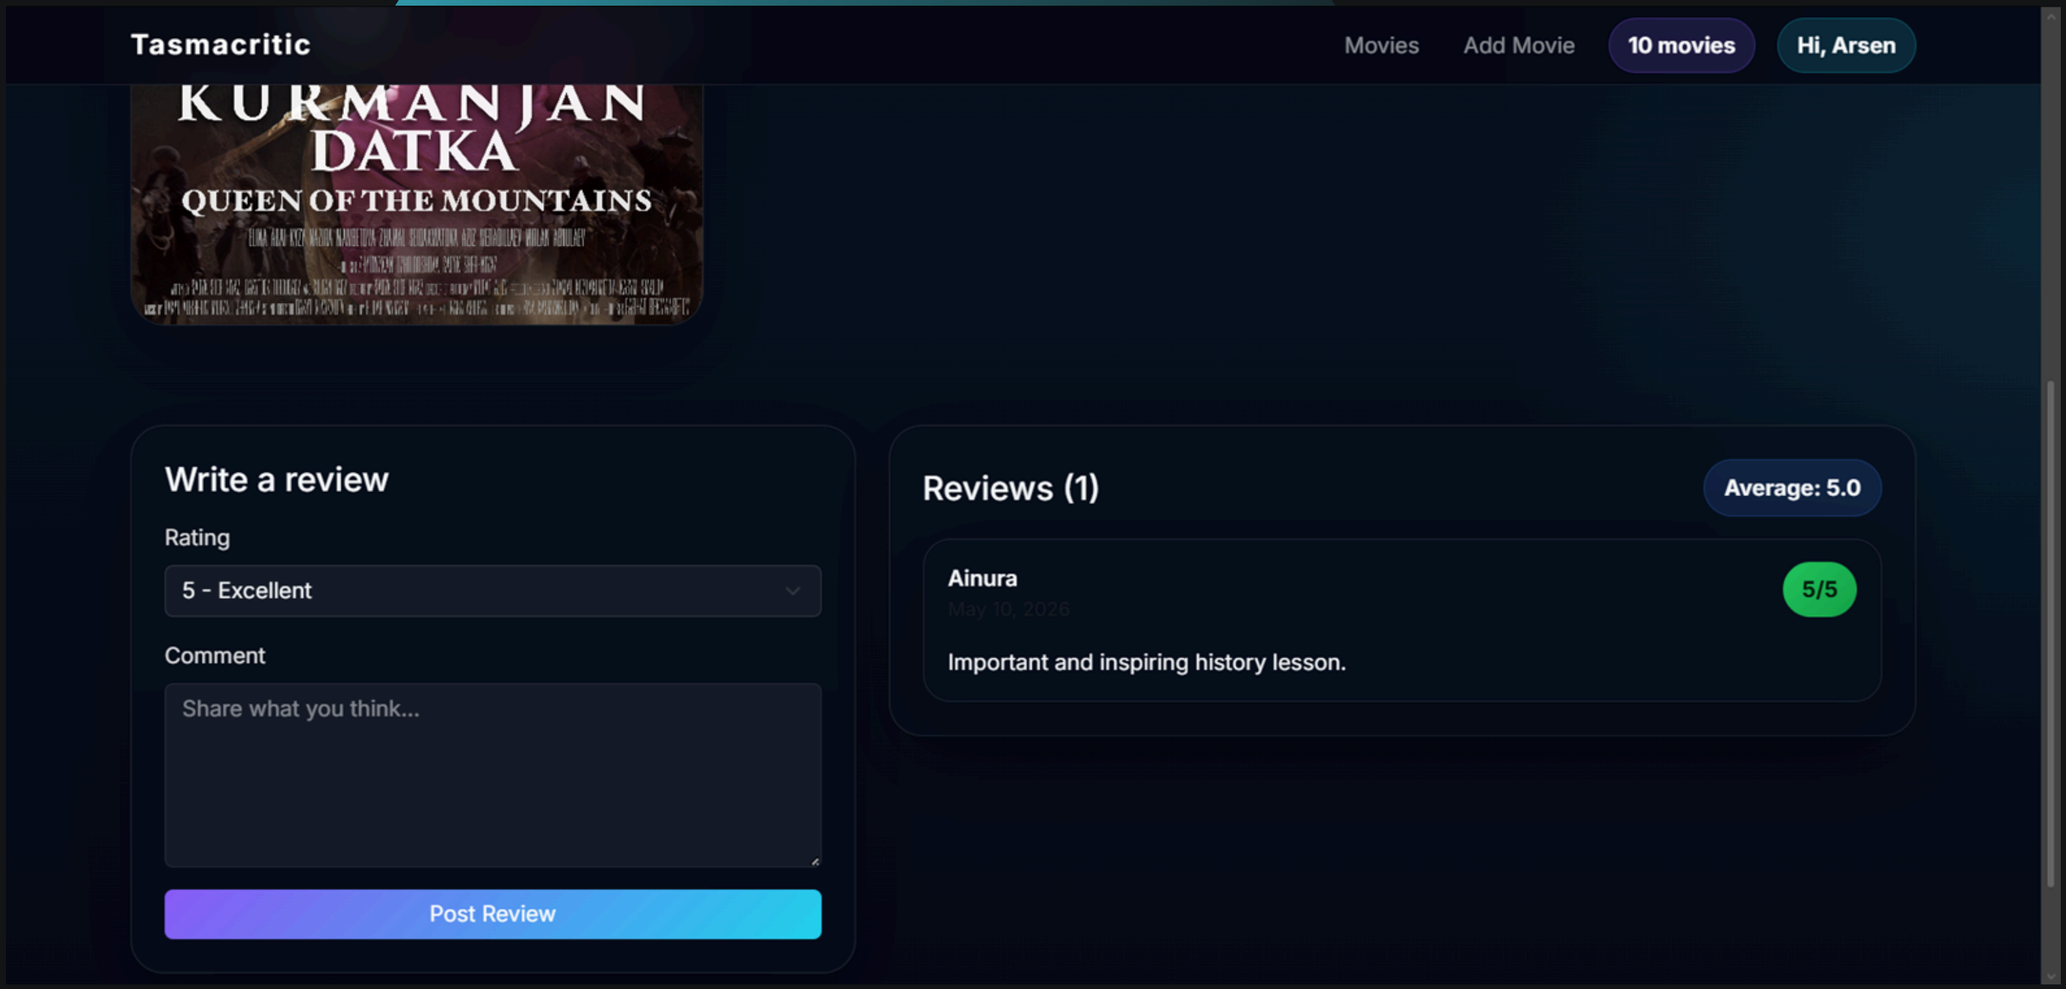
Demo / Results

Catalog with search, genre filter, sorting, rating colors, and pagination.



Demo / Results

Catalog with search, genre filter, sorting, rating colors, and pagination.



Thank You
